

YANKEE CON'S BIG DIVIDEND

Will Pay \$25,000 on the First of February.

HOW DR. FRANKLIN MADE MINE

MAY DAY COMES FORWARD WITH \$4,000.

Yesterday afternoon the directors of the Yankee Consolidated and declared an initial dividend of \$25,000, or 5 cents a share on the capital stock of the company, and designated Saturday, Feb. 1, as the date of distribution, with transfer books to close on the afternoon of the 25th. The action was not altogether unexpected, as it has been known for several weeks that the last dollar of indebtedness against the company had been wiped out and that money was being made hand over fist from the sale of ore, no less than fifty carloads of which were sent out during December.

In discussing the matter during the afternoon Manager Franklin said there was no question that during the next six months the Yankee would continue to pay \$25,000 every thirty days, and still have a surplus of not less than \$100,000 at the end of the year.

In a report touching the physical condition of the mine, which was submitted a few days since by Professor Walter D. Jenney, the eminent expert and geologist, the gentleman closed by saying there was enough ore now in sight to guarantee an output of from fifty to 100 tons daily for more than two years, and he figured that in its present state of development it could be relied upon to pay 3 per cent interest on the shares, counting them at \$5 each, or 40 per cent on the par value of the stock.

About one year ago Dr. Franklin was inveigled into buying 50,000 shares of old Yankee stock at 11 cents a share. It was after he had examined the workings and found a nice showing of ore. A few days later it developed the ore was coming from a neighboring mine and restitution was demanded for the value of the ore. Dr. Franklin, however, was not to be deterred. He bought more stock and declared that he would make a mine of it such as its old owners never dreamed was there—and he kept it.

During the year over \$100,000 has been spent in development work alone and in addition nearly, if not quite, \$500,000 has been spent in acquiring additional ground, and now he declares the mine is now being worked on a mile in undisputed territory. The huge ground was bought for \$250,000 and the capital stock of the company doubled to take it over.

Other valuable adjoining territory has also been acquired by the doctor's syndicate until now, he says, there is no danger of litigation over apexes.

He has converted the Yankee from a practically worthless prospect to one of the biggest dividend-payers in the state within a year's time, and it is not surprising that a man in a thousand under similar conditions would either have the nerve or ability to do so.

GOV. WELLS ON THE SHEBA.
Says He Believes Development Will Above Up Something Big.

Governor Heber M. Wells returned from Nevada last evening with several large red Nevada apples, and a large amount of enthusiasm for the Sheba. The apples came from Mill City, where the mine is located. They were little to do with the governor's trip, however. He is a director in the company and he is interested in the old Sheba property and he went to Nevada to make a thorough personal inspection of it.

"The only thing inexplicable to me," said the governor, "is the fact that the mine was ever abandoned. There is a shaft only 150 feet deep, and out of it a shaft \$50,000 worth of silver ore was extracted in the early days by Senators Fair and Hearst and others who were interested in the property. The mine was plucked down, and instead of looking for the property further and deeper, they closed it down, and it has been closed ever since. The ore was wonderfully rich. It had to run at least \$150 a ton. It had to be worth at least \$100 a ton. It was just a little narrow chute of it, and it was enough to pay wonderfully. In all well-managed mines today, a large part of the earnings is set aside for prospecting, but nothing of the kind was ever done on the Sheba. The ore was simply scooped out, and no effort was made to prospect."

"We intend to go down the hill and run a tunnel in to tap the vein at a depth of about 500 feet to do this. There is scarcely a doubt that we will get the vein, and we do, and the values are as good as they were before, the mine will be greater than ever. It will be a railroad near, and the expenses of mining will be less than before, while there will be more of the vein exposed."

Judge G. W. Bartch, president of the company, will remain on the ground a few days longer, making preparations for starting the work. A contract will be let for the tunnel, John Boyle and M. H. Henderson of Park City are to look over the ground preparatory to bidding on the contract. E. A. Vail went to survey the property.

MINES OF DETROIT DISTRICT.
Several New Strikes Reported—Fine Chance For Capital.

Deseret, Jan. 2.—Hearing of the recent strikes at "Drum" your correspondent, being interested, hid himself out to verify or disprove, according to ocular evidence. In justice to the camp and to those who have held it down for so long a time, I can truthfully say that I think the future of Detroit district is now assured.

The Martha people have a magnificent showing of copper-gold ore in the seventy-five-foot, wide of the 100-foot level. A cross-cut in the bottom of the mine shows fourteen feet of ore carrying 17 per cent copper and \$3.50 gold per ton, with only four feet of waste rock to the 200, and is almost completed. Indications are favorable that ore will be encountered before the 100-foot level is reached. In any event, regular shipments will be made as soon as connections are had, and a handsome profit will undoubtedly ensue.

Another strike has been made of equal importance to the above in the Copperhead. This, as well as the Martha, is owned by Payson and Benjamin people, though the Copperhead has a sprinkling of Salt Lake City value. The Martha is being worked by sinking and drifting to the present strike, which occurred under the old incline in a drift off the 132-foot shaft, and in character is entirely different from the Martha, being a quartziferous quartz. It samples over \$50 per ton in gold, and has every indication of being a big

thing. A carload was hoisted and it will require no sorting. In addition to this new strike there is an apparently inexhaustible supply of low-grade copper-gold ore in sight in the old workings.

Another strike has been made in the south end of the district by Joseph Friel, who has found eighteen inches of \$24 gold ore at the grass roots, entirely out of the lime and well out into the desert, and quartzite, a well-defined vein. This means a bona fide new ore, as there is an immense field of virgin territory yet to be prospected.

E. F. Pack has developed his Bluebird into a magnificent cyanide proposition, but owing to the scarcity of water it is idle.

Erickson & Hinckley are blocking out a fair grade of copper-gold ore in their Annie mine, but until better transportation facilities or new and cheaper treatment of siliceous ores are introduced, this character of ore must remain idle.

The Rattler group has a fine showing of rich ore, as has the Mahan group. There are many promising prospects which no doubt will give a good account at no distant day.

MAY DAY DIVIDEND ORDERED.
It Is For \$4,000 and That Sum Is to Be Regularly Paid.

On his arrival from camp yesterday morning, John A. Hunt, president of the May Day company, called a meeting of the directors and after explaining conditions at the property and weighing well the chances for a continuance of the performance, it was decided to resume the payment of dividends with a distribution of \$4,000, or 1 cent a share, on the 20th of this month. Transfer books are to close on Saturday next at 4 o'clock. There is now more than enough ore in sight to guarantee an output of from fifty to 100 tons daily for more than two years, and he figured that in its present state of development it could be relied upon to pay 3 per cent interest on the shares, counting them at \$5 each, or 40 per cent on the par value of the stock.

About one year ago Dr. Franklin was inveigled into buying 50,000 shares of old Yankee stock at 11 cents a share. It was after he had examined the workings and found a nice showing of ore. A few days later it developed the ore was coming from a neighboring mine and restitution was demanded for the value of the ore. Dr. Franklin, however, was not to be deterred. He bought more stock and declared that he would make a mine of it such as its old owners never dreamed was there—and he kept it.

During the year over \$100,000 has been spent in development work alone and in addition nearly, if not quite, \$500,000 has been spent in acquiring additional ground, and now he declares the mine is now being worked on a mile in undisputed territory. The huge ground was bought for \$250,000 and the capital stock of the company doubled to take it over.

Other valuable adjoining territory has also been acquired by the doctor's syndicate until now, he says, there is no danger of litigation over apexes.

He has converted the Yankee from a practically worthless prospect to one of the biggest dividend-payers in the state within a year's time, and it is not surprising that a man in a thousand under similar conditions would either have the nerve or ability to do so.

GOV. WELLS ON THE SHEBA.
Says He Believes Development Will Above Up Something Big.

Governor Heber M. Wells returned from Nevada last evening with several large red Nevada apples, and a large amount of enthusiasm for the Sheba. The apples came from Mill City, where the mine is located. They were little to do with the governor's trip, however. He is a director in the company and he is interested in the old Sheba property and he went to Nevada to make a thorough personal inspection of it.

"The only thing inexplicable to me," said the governor, "is the fact that the mine was ever abandoned. There is a shaft only 150 feet deep, and out of it a shaft \$50,000 worth of silver ore was extracted in the early days by Senators Fair and Hearst and others who were interested in the property. The mine was plucked down, and instead of looking for the property further and deeper, they closed it down, and it has been closed ever since. The ore was wonderfully rich. It had to run at least \$150 a ton. It had to
